

Claudio Ferri was born in \_\_\_\_\_ on June \_\_\_\_\_.

His career developed at the Rome University “La Sapienza”, where he started to publish his relevant papers on the pathophysiology of sodium homeostasis in hypertension, firstly with his research group and then in collaboration with several researchers worldwide, particularly the Endocrinology and Hypertension Division at the Harvard Medical School.

At the beginning of this century, Claudio Ferri was continuing in his studies and became firstly Associate and then Full Professor of Internal Medicine at the University of L’Aquila, where he is currently Director of the Division of Internal Medicine and Nephrology – ESH Center for Hypertension and Cardiovascular Prevention.

In the last decade, Claudio Ferri was the President of the Italian Society of Hypertension and is currently the President of its Scientific Council.

He wrote hundreds of peer reviewed papers, mainly in the field of hypertension and cardiovascular prevention, with an H index = 64 on Scopus. He is also the co-author of different books, either for medical students or residents, and commonly co-write informative papers for patients and their families, the most recent one being the educational leaflet on physical activity and cardiovascular prevention that has been published by the Italian Department of Health.

Currently, he is also PhD coordinator (Medicine and Public Health) and Director of the School in Internal Medicine.
